

Mobile Software Engineer | Android & Wearables

Mobile Software Engineer with 6+ years in Dubai building Android applications, SDK/API integrations, partner mobile solutions and internal tools. Delivered or supported platform integrations for 50+ Android and React Native applications, led a Kotlin Android product with 2M+ downloads, built an employee-facing Android solution adopted by 400+ users, and shipped 20+ connected-device and wearable applications.

EXPERIENCE

Software Engineer — Android, HMS Integrations & Wearables

Jan 2020 - Present

[Huawei Technologies](#)

Dubai, UAE

Android Apps & Platform Integrations

- Delivered SDK/API integrations and provided technical support across 50+ Android and React Native applications from 2020 to 2024, including Dubai Police, MAF Carrefour, Virgin Mobile and Visit Abu Dhabi.
- Built reusable React Native plugins for location and site-discovery integrations, reducing repeated partner implementation work.
- Helped enterprise partners bring Huawei-compatible Android releases to production by resolving SDK, dependency, Firebase/GMS compatibility and app-submission blockers.
- Led development and maintenance of AppFinder, a Kotlin Android product built with coroutines, Flow, Hilt and Jetpack components, reaching 2M+ downloads.
- Built a Kotlin/Jetpack Compose sales tracking and lead capture app with a Next.js/MongoDB dashboard, adopted by 400+ Huawei employees to record device sales and customer information.

Connected Device & Wearable Apps

- Delivered 20+ connected-device and wearable applications and designed 20+ small-screen interfaces in Figma, including released work for Emirates, MAF Carrefour, RTA and UAE MOI.
- Designed and built a reusable Wear Engine wrapper SDK for Android-to-watch synchronization, reducing repeated partner integration effort by 50%+ across mobility, government and banking applications.
- Mentored and onboarded engineers on HarmonyOS wearable delivery patterns, reusable components and partner implementation workflows.

Engineering Tooling

- Developed APK decompilation and static-analysis tooling using Node.js, Apktool and JADX to support mobile integration assessment and troubleshooting.
- Built internal automation tooling with Next.js, Node.js and MongoDB to streamline research, scraping and repeated CLI workflows, saving approximately two hours per day on routine team tasks.

Full Stack Web Developer

Algebratéc Technologies

Nov 2018 - Nov 2019

Constantine, Algeria

- Built an Angular and Laravel dashboard to manage client projects and API access.
- Designed a modern WordPress company website to improve Algebratéc's online presence and client-facing brand presentation.
- Automated repeated Angular project setup using Node.js scripts to improve reuse across customer projects.
- Developed PHP data collection tooling and Swagger-UI documentation pages to support API integrations.

Android Developer

Independent Projects

Nov 2016 - Oct 2018

Constantine, Algeria

- Designed, developed and published 25+ Android applications on Google Play using Java, Firebase and Google APIs.
- Built and deployed Laravel REST APIs supporting mobile application functionality.
- Developed two Android game projects with libGDX, working on rendering and performance optimization.

TECHNICAL SKILLS

Mobile: Android, Kotlin, Jetpack Compose, React Native, Wearables

Architecture: MVVM, Clean Architecture, Dependency Injection, Hilt, Coroutines, Flow

Platforms: HarmonyOS, HMS, ArkTS, ArkUI, Firebase

Backend/Web: REST APIs, Next.js, Node.js, MongoDB

Tools: Git, Android Studio, Gradle, Figma, Apktool, JADX, AI-assisted development workflows

EDUCATION

Bachelor of Computer Science

University of Abdelhamid Mehri

2015 - 2018

Constantine, Algeria

LANGUAGES

- **Arabic:** Native
- **English:** Full Professional Proficiency
- **French:** Basic Proficiency
